1: Holmberg--3 (1941-42) 1950 Siriono
116, 124, 125, 126

"Since Siriono society is a functioning one, three fundamental methods of gathering field data were employed: (1) the use of informants, (2) the recording of observations, and (3) the conducting of experiments. The first two methods were followed throughout the course of the work. Experiments, such as the introduction of food plants and animals were performed during the latter part of the study, although the extensive use of this method was limited by the termination of the research.

The application of the above field methods was facilitated by the use of various techniques of which the following were the principal ones: (1) the use of the language of the people studied and (2) the participation of the ethnographer in the cultural life of the tribe."
